# Mobile digital ImGo platform for managing and accounting tasks in teams
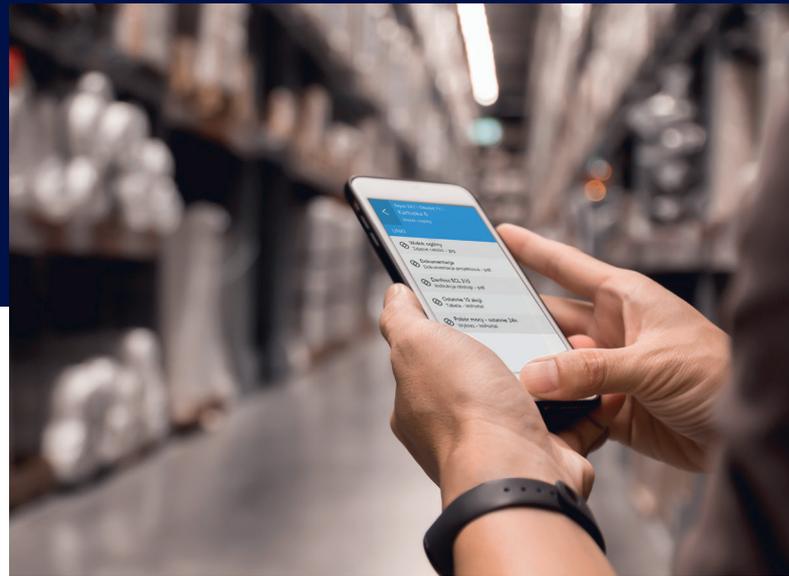

ImGo

An innovative digital solution embedded on mobile devices such as a mobile phone, tablet, laptop, supporting the monitoring of activities / tasks and their planning in everyday work

ImGo features:

- ImGo requires a process (list of activities) to be defined. A customizable digital form as an interface for the contractor allows to record activities or select them from a list. The system supports the validation of task performance and reporting by registering a place, object using NFC tag scanning or QR code. the activities performed create entries in the database that document the start / end and the scope of activities carried out in accordance with the planned sequence

- As a result, we receive a report that presents a summary of the tasks performed for the appropriate person, along with their status and other required data collected

Typical benefits of ImGo:

- elimination of paper reports (elimination of difficulties with access and analysis) or verbal communication of information,
- writing down the required values from the object (eg measurements) directly to the system,
- speeding up the response to reported values or reported irregularities,
- reporting on an ongoing basis, from the place of operations, and not post factum, ie from memory, which increases the credibility of data,
- ensuring access to up-to-date documentation in electronic form,
- providing access to the history of site operations and other information in the central repository, central reporting,
- monitoring of the tasks of internal and external teams

For which company is ImGo?

→ For any company that needs to monitor the tasks of the processes, e.g. device inspection, replacement of elements, calibrations, description of the operating status or failure.

In practice who use this system:

→ Production companies (IT departments, maintenance, production, laboratories, quality control, warehouses)
→ Municipal enterprises (thermal energy companies, waterworks)
→ Service companies, dental clinics, car fleet operators, hotels
