

IT system for production scheduling

ImPlan – following the spirit of Industry 4.0 – it combines in a unique way the improvement of planning processes, building of employee competences and providing precise APS tools, enabling permanent improvement of planning processes in the organization, both at the management, planning and scheduling levels.

ImPlan features:

- In terms of process and competence development ImPlan offers a package of workshops and training courses aimed at gathering experience and knowledge existing in the organization, joint development of target solutions taking into account current trends in the supply chain and developing the competences of participants in planning processes at all levels of the organization.
- From the software side, implan is an interactive, graphical planning tool that allows you to plan/schedule production and present the results in the form of a Gantt's chart.

Typical benefits of ImPlan:

- Thanks to the visualization of production schedules – with the use of Gantt charts – ImPlan enables easy verification of the duration of individual operations, order fulfillment dates, resource availability, priorities and existing threats to plan implementation.
- The planner can modify the schedules using a graphical interface – by moving individual operations on the Gantt chart – and ImPlan in the background makes sure that the resulting schedule is feasible.
- ImPlan provides the availability of schedules in their most current version in real time for all interested parties.

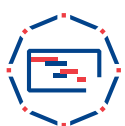

For which company is ImPlan?

→ For any company that needs to plan and/or schedule production processes.

In practice who use this system:

→ Companies with discrete, process and design production.
